

Shoe Grounders

We offer both heel grounder and toe grounder. Our designs are adjustable to fit all types of footwear. The ground strap reliably provides positive contact with the skin inside the sock or the shoe. On the outside surface, our heel and toe grounders use specially reinforced black conductive rubber for superior static control and on the inside; we use white, non-scuffing insulating rubber to prevent the transfer of black smudges or dirty marks on the user.

Heel Grounder

- quick release buckle
- unique elasticized rear section provides fit and comfort to all shoe types and sizes
- bright red heel band for clear identification
- meet or exceed IEC 61340-5-1, MIL HDBK 263B, MIL STD 1686B and ANSI/ESD-S1.1-2006
